

Creating CAMPUS-AIR Profile

This section involves creating the configuration profile for the CAMPUS-AIR network that will be further configured in the following section

1. Open the Start Menu and type 'Network and Sharing Center' into the search box and open the matching result
2. From the left hand side of the window, select **Manage Wireless Networks**

3. Click the **Add** button to add the CAMPUS-AIR profile, and then select **Manually Create a Network Profile**. Fill in the fields with the following information, then click **Next** to continue to the next step

4. Select "**Change Connection Settings**" which will open the configuration window for the new profile. If it fails to open (known issue in Windows) then double click it from the network profile window (The window seen on the right in step 2 above)

Configuring the CAMPUS-AIR Profile

This step involves modifying the existing or newly created configuration profile for the CAMPUS-AIR network

1. The CAMPUS-AIR profile window should already be open, having followed the previous section. If it is not, open it from the **Manage Wireless Networks** window (within the **Network and Sharing Center** in **Control Panel**)
2. Select the **Security** tab and click the **Settings** button. **Unselect** “**Validate server certificate**”, click the “**Configure**” button and **Unselect** the checkbox in the popup window. Click OK and OK again to return to the Security tab of the **CAMPUS-AIR** profile window
3. Click the **Advanced Settings** button, check **Specify Authentication Mode**, and choose **User Authentication** from the dropdown list. Click the **Save Credentials** button and enter in ONCAMPUS\100##### and your network password. Close off all windows to complete the configuration

The image shows a sequence of screenshots illustrating the configuration steps for a CAMPUS-AIR wireless network profile in Windows 7. The main window is 'CAMPUS-AIR Wireless Network Properties' with the 'Security' tab selected. An arrow points to the 'Settings' button. A secondary window, 'Protected EAP Properties', is shown with the 'Validate server certificate' checkbox unselected, labeled 'NOT Checked'. Another window, 'EAP MSCHAPv2 Properties', is shown with the checkbox 'Automatically use my Windows logon name and password (and domain if any)' unselected, also labeled 'NOT Checked'. The 'Advanced settings' window is shown with 'Specify authentication mode' checked and 'User authentication' selected in the dropdown. The 'Save credentials' button is highlighted. A 'Windows Security' dialog box is shown with the username 'ONCAMPUS\100#####' and a password field, with an arrow pointing to the text 'Use Your Own ID and Network Password'. A redacted section of the 'Advanced settings' window is labeled 'Middle of Window Removed - Nothing to Change'.
